Contributions should, preferably, be sent to a member of the Advisory Editorial Board who is familiar with the research reported, or to one of the Editors:

A.D. BUCKINGHAM, F.R.S.
Editor of Chemical Physics Letters
University Chemical Laboratory, Lensfield Road
Cambridge CB2 1EW, UK

R.N. ZARE
Editor of Chemical Physics Letters
Department of Chemistry, Stanford University
Stanford, CA 94305, USA

in which case authors from the Western Hemisphere are requested to send their manuscript to the USA Editor.
Important: please adhere to instructions to authors, to be found on the last page of each volume.

Chemical Physics Letters is published weekly. The subscription price per volume is Dfl. 347.00 (approx. $ 128.50) excluding Dfl. 22.00 (approx. $ 8.10) postage. Claims for issues not received should be made within three months of publication. If not, they cannot be honoured free of charge.

Subscriptions should be sent to the publisher: ELSEVIER SCIENCE PUBLISHERS B.V., Journals Department, P.O. Box 211, 1000 AE Amsterdam, The Netherlands, or to any subscription agent or bookseller. For personal rates and conditions please contact the Publisher.

Elsevier Science Publishers B.V. All rights reserved. No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means, electronic, mechanical, photocopying, recording or otherwise, without the prior permission of the publisher, Elsevier Science Publishers B.V. (North-Holland Physics Publishing Division), P.O. Box 103, 1000 AC Amsterdam, The Netherlands.
Special regulations for authors. Upon acceptance of an article by the journal, the author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.
Submission to this journal of a paper entails the author's irrevocable and exclusive authorization of the publisher to collect any sums or considerations for copying or reproduction payable by third parties (as mentioned in article 17 paragraph 2 of the Dutch Copyright Act of 1912 and in the Royal Decree of June 20, 1974 (S.351) pursuant to article 16b of the Dutch Copyright Act of 1912) and/or to act in or out of Court in connection therewith.
Special regulations for readers in the USA. This journal has been registered with the Copyright Clearance Center, Inc. Consent is given for copyright of articles for personal or internal use, or for the personal use of specific clients. This consent is given on the condition that the copier pays through the Center the per-copy fee stated in the code on the first page of each article for copying beyond that permitted by Sections 107 or 108 of the US Copyright Law. The appropriate fee should be forwarded with a copy of the first page of the article to the Copyright Clearance Center, Inc., 21 Congress Street, Salem, MA 01970, USA. If no code appears in an article, the author has not given broad consent to copy and permission to copy must be obtained directly from the author. All articles published prior to 1981 may be copied for a per-copy fee of US $ 2.25, also payable through the Center. This consent does not extend to other kinds of copying, such as for general distribution, resale, advertising and promotion purposes, or for creating new collective works. Special written permission must be obtained from the publisher for such copying.

MODERN PROBLEMS IN CONDENSED MATTER SCIENCES

Volume 5: Light Scattering Near Phase Transitions

edited by H.Z. CUMMINS, *City College of the City University of New York, NY, U.S.A. and* A.P. LEVANYUK, *Academy of Sciences of the U.S.S.R., Moscow, U.S.S.R.*

1983 xvi + 656 pages Price: US $128.75/Dfl. 335.00 ISBN 0-444-86466-0
Subscription Price: US $109.50/Dfl. 284.75

The field of phase transitions and critical phenomena has experienced a period of extremely rapid growth during the last two decades, both in the development of new theoretical approaches and in the application of new experimental techniques. Since the development of the laser in the early 1960's, light scattering has played an increasingly crucial role in the investigation of many types of phase transitions and the published work in this field is now widely dispersed in a large number of books and journals.

This book, volume 5 in the series Modern Problems in Condensed Matter Sciences, presents a comprehensive overview of contemporary theoretical and experimental research in this field. The reviews are written by authors who have actively contributed to the developments that have taken place in both Eastern and Western countries.

CONTENTS: Preface. **Part I. Theory.** 1. General theory of light scattering near phase transitions in ideal crystals *(V.L. Ginzburg, A.A. Sobyanin and A.P. Levanyuk).* 2. Light scattering anomalies due to defects *(A.P. Levanyuk, A.S. Sigov and A.A. Sobyanin).* 3. Light scattering from incommensurate phases *(V.A. Golovko and A.P. Levanyuk).* 4. Light scattering and phase transitions in liquid crystals *(V.A. Belyakov and E.I. Kats).* **Part II. Experiment.** 5. Raman spectroscopy of structural phase transitions *(J.F. Scott).* 6. Brillouin scattering studies of phase transitions in crystals *(H.Z. Cummins).* 7. Central peaks near structural phase transitions *(P.A. Fleury and K.B. Lyons).* 8. Light scattering studies of incommensurate phase transitions *(M.V. Klein).* 9. Light scattering investigations of the critical regions in fluids *(W.I. Goldburg).* 10. Scattering spectroscopy of liquid crystals *(J.D. Litster).* 11. Light scattering in quartz and ammonium chloride and its peculiar ties in the vicinity of phase transition of crystals. A retrospective view and recent results *(I.A. Yakovlev and O.A. Shustin).* Author Index. Subject Index. Materials Index.

Volume 6
Electron-Hole droplets in Semiconductors
edited by C.D. Jeffries *and* L.V. Keldysh

Volume 4
Spectroscopy and Excitation Dynamics of Condensed Molecular Systems
edited by V.M. Agranovich *and* R.M. Hochstrasser

Volume 3
Electronic Excitation Energy Transfer in Condensed Matter
by V.M. Agranovich *and* M.D. Galanin

Volume 2
Excitons
edited by E.I. Rashba *and* M.D. Sturge

Volume 1
Surface Polaritons
edited by V.M. Agranovich *and* D.L. Mills

Handbook on the Physics and Chemistry of Rare Earths, Volume 6

edited by KARL A. GSCHNEIDNER, JR., *Ames Laboratory DOE, Iowa State University, U.S.A. and* LEROY EYRING, *Arizona State University, U.S.A.*

1983 x + 574 pages Price: US $138.25/Dfl. 325.00 ISBN 0-444-86592-6

A COMMENT FROM THE PRESS ON VOLUMES PREVIOUSLY PUBLISHED:

". . . Highly experienced authors have written each review usually at a level suitable for advanced postgraduate students and research workers from a variety of fields. With the great richness of information involving references to other review articles written from different points of view, the books are an important reference source and should be on the shelves of most libraries."

Journal of Applied Crystallography

Although volumes three, four and five contained some information concerning ternary and higher order materials, this vast area is still virtually unknown. Volume six is the beginning of an extensive exploration of this area which will extend into future volumes.

The four chapters in volume six deal with ternary (and higher order) systems, compounds, etc., which contain at least one rare earth metal and at least one nonmetallic element (H, B, C or Si). The first chapter deals with hydrogen absorption by intermetallic compounds. The next two chapters are quite complimentary dealing with the crystal chemistry of ternary borides and silicides and phase equilibria in ternary and higher order systems involving boron. A companion chapter on phase equilibria in ternary and higher order systems involving silicon is scheduled for volume seven. The last chapter of volume six is a little more specialised and is concerned with divalent samarium and ytterbium in organic chemistry. Future volumes are scheduled to contain more reviews on the organic chemistry of rare earths - a rapidly growing and dynamic area of ternary and higher order materials.

CONTENTS: **Chapters: 1.** Hydrogen absorption in intermetallic compounds *(K.H.J. Buschow).* **2.** Crystal structures and crystal chemistry of ternary rare earth-transition, metal borides, silicides and homologues *(E. Parthé and B. Chabot).* **3.** Phase equilibria in ternary and higher order systems with rare earth elements and boron *(P. Rogl).* **4.** Preparation of divalent ytterbium and samarium derivatives and their use in organic chemistry *(H.B. Kagan and J.L. Namy).* Index.
